# ➢ Event Management System

## Introduction

The Event Management App is designed for university students and faculty to keep track of upcoming events. It allows users to view event lists, check event details, register for events, and receive reminders. The app ensures that students never miss important academic, cultural, or social activities.

### Features

- View a list of upcoming events.
- Check details of specific events (date, venue, description).
- Register for events directly through the app.
- Access "My Events" section for registered events.
- Notifications and reminders for registered events.

## Prototype Screens (Wireframes)

### 1. Login/Register Screen

Options for student/faculty login.

Username and password fields.

Login and Register buttons.

## 2. Event List Screen

Displays list of upcoming university events.

Each event shows name, date, and location.

Scrollable list format.

## 3. Event Details Screen

Shows event name, date, type, time and description.

Register button for user participation.

## 4. My Events Screen

Displays list of events registered by the user.

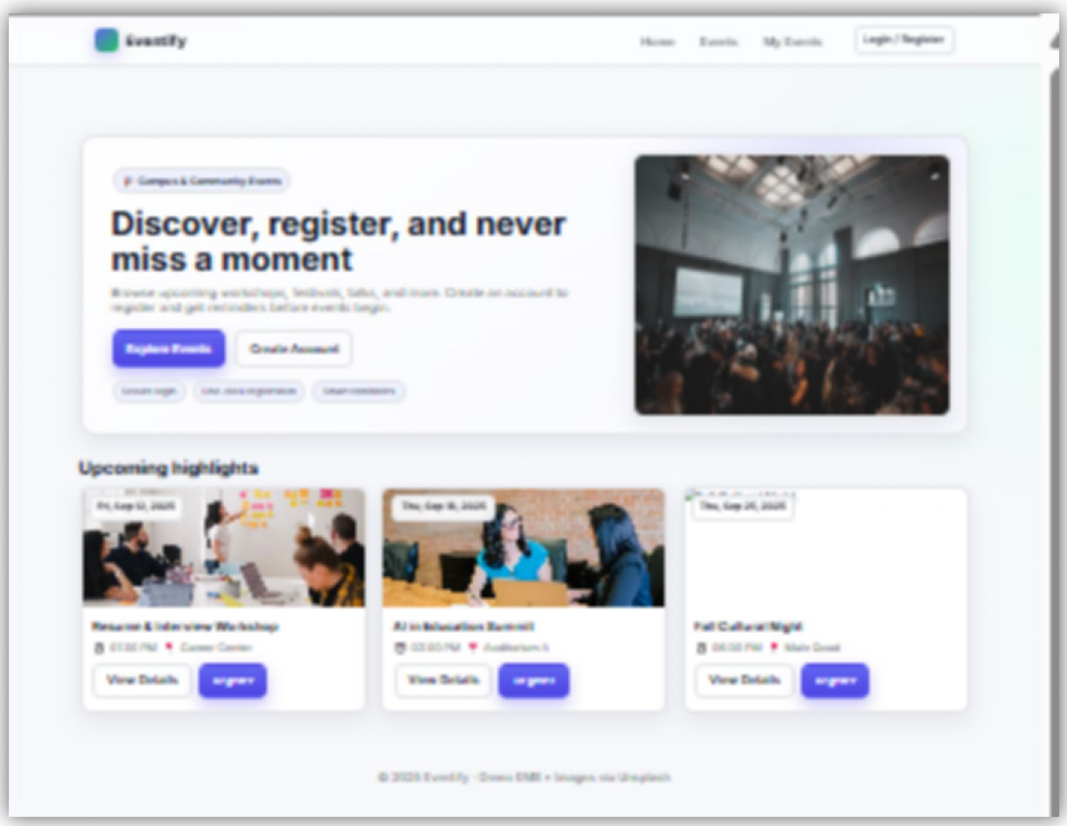
Shows event reminders and details.

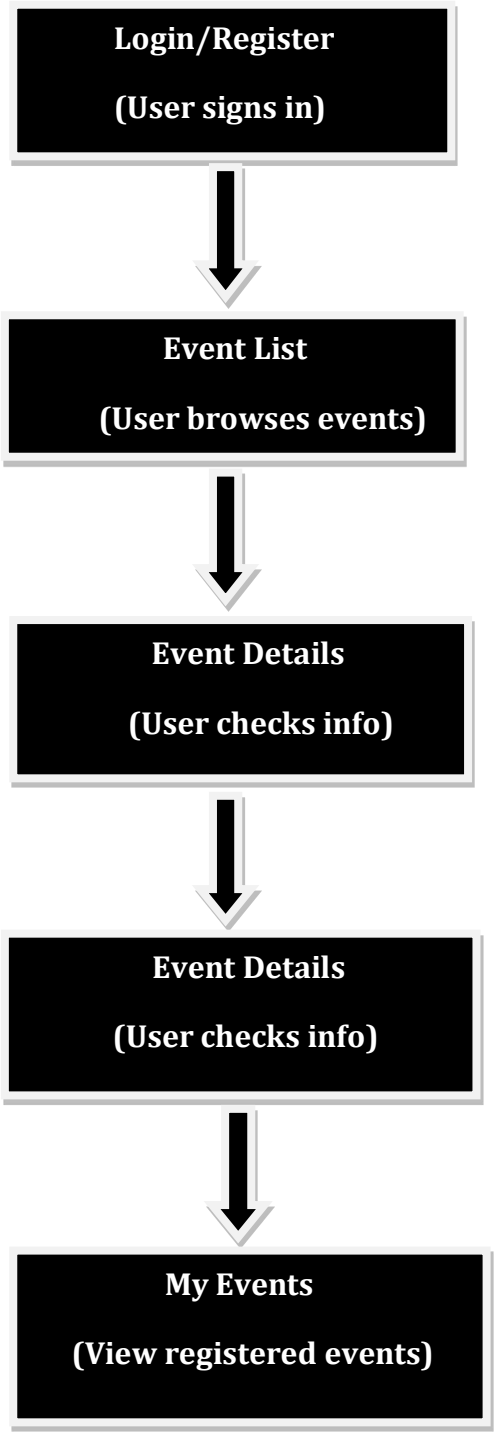
# Home Page

The **Home Page** of the Event Management System welcomes students and faculty. It gives a short introduction about the system and guides users on how to start. From here, users can:

1. **Login or Register** – Students and faculty can sign in or create an account.
2. **Explore Events** – View the list of upcoming events with their details like date, time, and venue.
3. **Register & Get Reminders** – Register for events and track them easily in "My Events."

This page is designed to be **user-friendly, clear, and mobile-friendly**, so users can quickly access all features.



## Basic Flow


1. Login/Register → User signs in.
2. Event List → User browses upcoming events.
3. Event Details → User checks event information.
4. Register → User registers for selected event.
5. My Events → User views registered events with reminders.
